

# ANXIOUS. WITHDRAWN. DEPRESSED.

## IT'S NOT YOUR FAULT.

**POSTPARTUM DEPRESSION** is a biological complication of pregnancy. Symptoms can be severe and shouldn't be ignored.

The **Hummingbird Study** is a research study evaluating an investigational medication in women with moderate to severe postpartum depression.

### YOU MAY QUALIFY TO PARTICIPATE IF YOU:

- Are between 18 to 45 years old
- Gave birth within the last 6 months
- Frequently feel extremely sad, anxious, or overwhelmed and these symptoms are associated with postpartum depression

*The study doctor will discuss other requirements.*

### IF YOU QUALIFY AND DECIDE TO PARTICIPATE, YOU WILL RECEIVE:

- Study-related care during the 3-day, in-patient period
- All study-related medical care and medication at no cost
- Transportation may be provided for those who require assistance

Up to **20% of women** experience postpartum depression after childbirth.<sup>1</sup>

**YOU ARE NOT ALONE.** SEE IF YOU MAY PRE-QUALIFY FOR THE STUDY TODAY:
